

Teresa NORAT

Principal Research, Epidemiologist
School of Public Health
Imperial College London

Dr. Norat is a Principal Research Fellow at the Department of Epidemiology and Biostatistics at Imperial College London. Her primary scientific interests have been in determining the role of nutritional factors to the risk of cancers and the study of nutritional and lifestyle determinants of weight gain.

Dr. Norat has been a long-term investigator with the European Prospective Investigation into Cancer and Nutrition (EPIC). She is the Coordinator of the Continuous Update Project (WCRF/AICR), which aims to provide a comprehensive and up to date depiction of scientific developments on the relationship between diet, physical activity, obesity and cancer as a basis for the formulation for cancer prevention recommendations.
