

Independent Load Forecast Workshop

September 15, 2014

Caveat

- The results provided here are subject to revision if necessary as a result of stakeholder feedback

Topics

- Review of previous work
- Energy efficiency/DSM adjustments
- State-level energy forecasts
- LRZ-level energy forecasts
- LRZ non-coincident peaks
- MISO-level forecasts

Previous Work

State Econometric Models

- We developed econometric models to project annual retail sales for each of the 15 MISO states, using various economic, demographic, and weather variables
- Presented at April workshop
- Some updates presented at July workshop

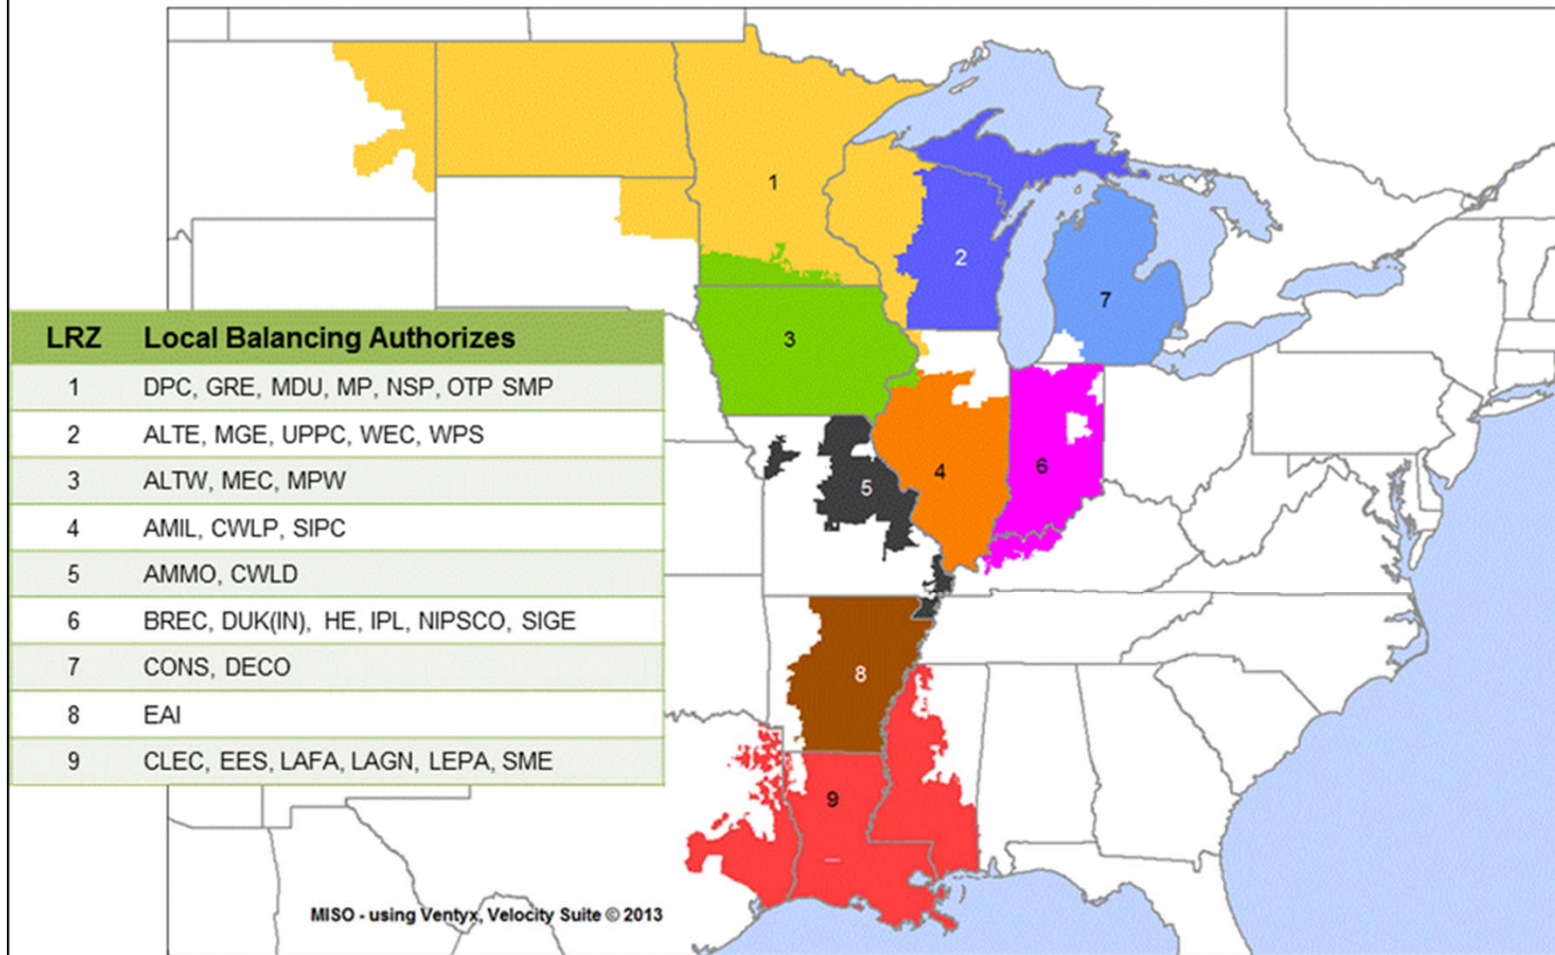

Dependent and Explanatory Variables

| Variables | EvIEWS name | Data Source |
|-------------------------------------------------------------------------------------------------------------------------------|------------------------|--------------------|
| <i>Dependent variable:</i> | | |
| Electricity sales | ELECTRICITY_SALES | EIA |
| <i>Explanatory variables:</i> | | |
| Electricity prices | REAL_ELECTRICITY_PRICE | EIA* |
| Natural gas prices | REAL_NATURAL_GAS_PRICE | EIA* |
| Real personal income | REAL_INCOME | BEA* |
| Population | POPULATION | IHS Global Insight |
| Manufacturing employment | MANUFACTURING_EMP | BLS |
| Non-manufacturing employment | NON_MANUFACTURING_EMP | BLS |
| Non-farm employment | NON_FARM_EMP | BLS |
| Gross state product | REAL_GSP | BEA |
| Cooling degree days | CDD | NOAA |
| Heating degree days | HDD | NOAA |
| * Original data was in nominal dollars. SUFG converted it to real 2005 dollars using state level CPI from IHS Global Insight. | | |

Allocation Factors

- Allocation factors were determined to convert state annual retail sales to LRZ retail sales
- Based on historical data
- Presented at July workshop
- Some modifications have been done based on stakeholder and MISO staff feedback

2014 Planning Year – MISO LRZ Map

| MISO LRZ | State | Allocation Factor | |
|----------|-------|----------------------------|--------------------------------|
| | | Basis | Result |
| 1 | IA | Historical average | Constant at 1.8% |
| | IL | Historical average | Constant at 0.0002% |
| | MI | Historical average | Constant at 0.1% |
| | MN | Historical average | Constant at 96.1% |
| | ND+MT | Historical trend | Declining from 32.7% to 32.1% |
| | SD | Historical average | Constant at 24.7% |
| | WI | Historical average | Constant at 14.9% |
| 2 | MI | Last observed | Constant at 4.9% |
| | WI | Historical average | Constant at 84.9% |
| 3 | IA | Last observed | Constant at 91.5% |
| | IL | Historical average | Constant at 1.4% |
| | MN | Historical average | Constant at 1.3% |
| | SD | Historical average | Constant at 1.8% |
| 4 | IL | Chicago vs. state growth | Declining from 32.4% to 31.9% |
| 5 | MO | St. Louis vs. state growth | Declining from 50.0% to 49.0% |
| 6 | IN+KY | Historical trend | Increasing from 48.8% to 49.0% |
| 7 | MI | Historical average | Constant at 90.2% |
| 8 | AR | Historical average | Constant at 69.7% |
| | MO | Historical average | Constant at 0.3% |
| 9 | LA | Historical average | Constant at 91.8% |
| | MS | Historical average | Constant at 43.7% |
| | TX | Historical average | Constant at 5.4% |

Energy to Peak Conversions

- We developed conversion factors to translate LRZ energy to LRZ peak demand under normal weather conditions
- Based on historical hourly loads and temperature
- Presented at July workshop

State Annual Retail Energy Forecasts

Explanatory Variable CAGR* (%)

| Variables | AR | IL | IN | IA | KY | LA | MI | MN | MS | MO | MT | ND | SD | TX | WI |
|------------------------|-------|------|-------|------|-------|-------|------|-------|------|------|-------|-------|-------|------|-------|
| REAL_ELECTRICITY_PRICE | 0.75 | 0.33 | 0.99 | 1.09 | 0.84 | 0.92 | 1.05 | 1.21 | 0.96 | 1.20 | 0.76 | 1.16 | 1.25 | 0.69 | 0.90 |
| REAL_NATURAL_GAS_PRICE | -0.72 | | -0.43 | | -0.03 | | | -0.59 | | | -0.62 | -0.40 | -0.44 | | -0.58 |
| REAL_INCOME | | | | | | | | 2.68 | | | | | | | |
| POPULATION | | | | | 0.52 | | | | | 0.51 | | | 0.84 | | |
| REAL_INCOME/POPULATION | | 2.11 | | 2.21 | | 2.10 | 1.93 | | 2.36 | | 2.56 | | | 2.18 | 2.40 |
| REAL_GSP | 2.51 | | 2.40 | 2.58 | | | 2.08 | | 2.37 | | | | | 3.61 | 2.19 |
| NON_MANUFACTURING_EMP | | 0.70 | | | | | | | | 0.88 | | 0.79 | | | |
| MANUFACTURING_EMP | | | | | | -0.10 | | | | | 0.32 | | | | |

* CAGR – Compound Annual Growth Rate

Energy Efficiency/DSM

- Adjustments were made to the state forecasts based on each state's energy efficiency requirements per the Database of State Incentives for Renewables & Efficiency (DSIRE) and contact with some regulatory commissions
- For those states that have mandates that are unspecified for some future year, the last specified requirement was assumed

Energy Efficiency/DSM

- Past energy efficiency efforts are included in the historical data and affect the econometric model coefficients
- The econometric models will project efficiency improvements consistent with those experienced in the past
- The adjustments done here represent incremental efforts beginning in 2013

State EE Requirements

| State | Applies to: | Savings |
|------------------|--------------------------------------------------|---------------------------------------------------------------------------------------------------------------------|
| Arkansas | Investor-owned Utilities | 0.75% (2013 and 2014), 0.9% (2015 and beyond) of 2010 demand |
| Illinois | Investor-owned Utilities | 1.0% (2013), 1.4% (2014), 1.8% (2015), 2.0% (2016 and beyond) |
| Indiana | Investor-owned Utilities | 0.9% (2013) and 1.1% (2014) of preceding three year average |
| Iowa | Mid-American Energy and Interstate Power & Light | 420 GWh (2014, 2015), 416 GWh (2016), 422 GWh (2017), 427 GWh (2018 and beyond) |
| Michigan | Investor-owned Utilities | 1.0% annually |
| Minnesota | Investor-owned Utilities | 1.5% of three year average annually |
| Missouri | Utilities | 0.5% (2013), increasing by 0.2% each year until reaching 1.9% (2020 and beyond) |
| Texas | Investor-owned Utilities | 30% of incremental load growth each year |
| Wisconsin | Utilities | Savings goal set by PSC on a 4-year basis; most recent averaged 454 GWh/year, which was assumed constant throughout |

Arkansas Retail Sales (GWh)

- 2015-2024
projected CAGR
 - gross 1.70%
 - net 1.23%
- 1990-2012
actual CAGR
 - 2.48%

Illinois Retail Sales (GWh)

- 2015-2024 projected CAGR
 - gross 0.82%
 - net -0.89%
- 1990-2012 actual CAGR
 - 1.15%

Indiana Retail Sales (GWh)

- 2015-2024
projected CAGR
 - gross 1.64%
 - net 1.67%
- 1990-2012
actual CAGR
 - 1.61%

CAGR – Compound Annual Growth Rate

Iowa Retail Sales (GWh)

- 2015-2024
projected
CAGR
 - gross 1.66%
 - net 0.86%
- 1990-2012
actual CAGR

CAGR – Compound Annual Growth Rate

Wisconsin Retail Sales (GWh)

- 2015-2024
projected
CAGR
 - gross 2.04%
 - net 1.51%
- 1990-2012
actual CAGR
 - 1.54%

LRZ Energy Forecasts

Retail Sales vs. Metered Load

- The state-level forecasts are developed for retail sales (customer level) but the LRZ forecasts need to be for metered loads (substation level)
- The difference is primarily due to losses on the distribution system
- We have calculated an adjustment based on historical data

Distribution Losses

- Distribution losses were calculated by comparing EIA retail sales numbers to LBA metered load numbers and are expressed as a % of retail sales

| LRZ | Dist. Losses |
|-----|--------------|
| 1 | 8.85% |
| 2 | 2.26% |
| 3 | 3.33% |
| 4 | 6.65% |
| 5 | 4.98% |
| 6 | 5.79% |
| 7 | 7.19% |
| 8 | 3.57% |
| 9 | 3.23% |

LRZ Gross* Metered Load (GWh)

| Year | LRZ1 | LRZ2 | LRZ3 | LRZ4 | LRZ5 | LRZ6 | LRZ7 | LRZ8 | LRZ9 |
|----------------------------------|---------|--------|--------|--------|--------|---------|---------|--------|---------|
| 2013 | 100,101 | 66,632 | 47,573 | 49,944 | 44,254 | 102,125 | 101,553 | 34,223 | 126,543 |
| 2014 | 97,543 | 66,319 | 46,938 | 49,798 | 44,088 | 102,431 | 102,244 | 34,711 | 127,405 |
| 2015 | 99,431 | 67,687 | 47,736 | 50,660 | 44,566 | 103,957 | 104,223 | 35,300 | 127,803 |

* With adjustment for state EE programs

LRZ Peak Demand

Metered Load vs. Resource Needs

- The peak demand forecasts are developed for metered loads (substation level) but resource needs are determined at the generator level
- The difference is primarily due to losses on the transmission system
- We have NOT calculated an adjustment because we do not have the necessary data
- We will work with MISO to get that data

LRZ Non-coincident Peaks

- The following slides provide LRZ summer and winter peak demands that are non-coincident with the MISO peak
- Thus, the arithmetic sum of the LRZ peaks is greater than the MISO coincident peak

LRZ 1 Non-coincident Peak (MW)

LRZ 2 Non-coincident Peak (MW)

LRZ 3 Non-coincident Peak (MW)

LRZ 4 Non-coincident Peak (MW)

LRZ 5 Non-coincident Peak (MW)

LRZ 6 Non-coincident Peak (MW)

LRZ 7 Non-coincident Peak (MW)

LRZ 8 Non-coincident Peak (MW)

LRZ 9 Non-coincident Peak (MW)

MISO Level Forecasts

Energy and Peak Demand

- The MISO system energy and peak demand projections here are at the metered load (substation) level
- Energy is the arithmetic sum of the LRZ energy forecasts
- Peak demand is determined using coincidence factors

MISO Energy (Metered Load in GWh)

| Year | MISO energy without EE adjustment | MISO energy with EE adjustment |
|----------------------------------|--------------------------------------|-----------------------------------|
| 2013 | 672,947 | 669,056 |
| 2014 | 671,478 | 663,303 |
