

Peter Cummings is the John R. Hall Professor of Chemical Engineering at Vanderbilt University. He also holds the position of Distinguished Visiting Scientist in the Chemical Sciences Division at Oak Ridge National Laboratory (ORNL) and is Director of the Nanomaterials Theory Institute, part of the ORNL Center for Nanophase Materials Sciences. He is the recipient of many awards, including the 1998 Alpha Chi Sigma Award from the American Institute of Chemical Engineers (its premier research award recognizing research achievement by a single individual over the previous decade). He is an editor of the international journal *Fluid Phase Equilibria*, is a member of the editorial advisory board of *Molecular Physics*, and member of the editorial boards of *Molecular Simulation*, *Journal of Chemical Thermodynamics*, and *Journal of Theoretical and Computational Nanoscience*. Professor Cummings is internationally renowned for his research on computational molecular approaches to predicting physical properties in systems of fundamental and industrial interest, such as nanostructured materials, supercritical aqueous solutions, alkane fluids, polymer solutions and lubricants. He is the author of over 250 refereed publications and a frequent invited or plenary speaker at international conferences.
