

Funding for International Research Experience for Students

East Asia and Pacific Summer Institutes

Looking for international experience while working on your graduate degree?

Travel to
Australia, China, Japan,
Korea, New Zealand,
Singapore, or Taiwan

The National Science Foundation offers fully funded international research collaboration opportunities through the East Asia and Pacific Summer Institutes program. Graduate students may travel to Australia, China, Japan, Korea, New Zealand, Singapore, or Taiwan for 8 weeks during the summer, to collaborate at foreign universities or institutes. This program covers travel and housing costs with a \$5000 stipend. This is a great way to get global experience, travel, and learn new research skills from a foreign host institution.

Tuesday, Oct. 21

4:30 - 5:30 pm, ME 117

Discovery Park will be hosting an info session on how to successfully apply for the EAPSI program.

Douglas Cook, Graduate Research Assistant in Mechanical Engineering, will give his perspective as a previous EAPSI student. The session will also provide an overview of the program, application advice, and a description of how you can use Purdue's overseas connections to craft a successful application.
