SPEECH, LANGUAGE, AND HEARING SCIENCES

Communication shapes how we understand and interact with the world around us. Studying communication will allow you to explore and develop methods that help improve lives. Students develop skills and knowledge they can apply to a wide variety of careers and industries or that can be used to pursue advanced degrees in other fields.

MAJORS

Speech, Language, and Hearing Sciences

Majors in the Department of Speech, Language, and Hearing Sciences will allow you to explore and understand all aspects of communication — including speech, language, and hearing. As a speech-language pathologist, you can help people communicate, understand and interact with the world around them. As an audiologist, you can help people understand and interact with the world around them. As an audiologist, you can help people hear, understand, and communicate.

HOSPITALITY AND TOURISM MANAGEMENT

Just like products and brands, businesses and services can have a major impact on people’s daily lives. Our School of Hospitality and Tourism Management’s top-ranked program features programs and research dedicated to informing people’s behavioral choices, improving their health, and enhancing their quality of life. Throughout our nine academic units, we tackle the human problems that confront people at home, school, work, and play in the community.

HABITALIA FADUL

Sudan

Public Health Manager

“Learn to love the environment” or “mastering your challenges” are two of the most common advice to international students from my country. I wish I had these words of wisdom from my Purdue professors, my mentors, and my Purdue friends from the very beginning. Toeing in is a never-ending process but I was able to learn the values and the importance of the environment and respect.

Here we can exchange the international student’s ideas and experience. I was able to learn and accept different perspectives from international students around the world. I was able to make new friends and learn new things. I was able to improve my communication, interpersonal, and interpersonal skills. I believe that the Purdue University International Student program was a great experience in my life. I thank my professors, my mentors, and my Purdue friends who motivated me and helped me to achieve my goals. I recommend this program to all international students who are interested in improving their English and communication skills. I recommend this program to all international students who are interested in improving their English and communication skills.

My favorite thing about Purdue is the campus. It feels like home away from home. I like the challenging curriculum which will motivate you, stimulates your brain, and prepares you for the real world. I like the challenging curriculum which will motivate you, stimulates your brain, and prepares you for the real world.

Purdue offers unimaginable opportunities and a chance to interact with people from all over the world. I have met people from many different backgrounds, raising my awareness of different cultures.

LEARNING BY DOING
All HHS majors offer an opportunity for hands-on learning, such as an internship, clinical experience, or a co-op, allowing you to gain valuable real-world experience before you graduate. Undergraduate research offers students the chance to work on faculty-mentored research projects.

LEARNING COMMUNITIES
Learning communities are special ways for first-year students to make friends and learn how to navigate Purdue. These small, theme-based communities create higher-quality, more frequent interactions and greater sense of belonging than students who don’t participate. Learning communities in the College of Health and Human Sciences focus on improving health and wellness.

STUDENT AND CAREER SERVICES
Your academic advisor will help you explore your interests, majors, and career goals in addition to questions concerning your major, academic programs, graduation requirements, and University regulations. Additionally, HHS offers students valuable career-related resources, including free events that explore career paths for HHS majors, teach valuable skills for internship and job searches, and inform students about planning for graduate/professional school. Some HHS academic units also host career fairs.
