The Brain and Cognitive Sciences (BCS) program in the Department of Psychology at Temple University is seeking highly qualified PhD student applicants. Research in the BCS explores a wide range of topics spanning the domains of cognition, perception, and neuroscience. As an integral part of their training, students in the program are given the opportunity to engage in basic and applied research using a host of advanced research methodologies including fMRI, brain stimulation, eye-tracking, EEG, lesion studies, genetics, cellular and molecular biology, and more. The Temple University Department of Psychology is a dynamic and productive environment for students, and has been ranked among the top in the U.S. based on faculty research, funding, and scholarly productivity.

Further information about the BCS program, the application process, and individual faculty research can be found at [http://www.cla.temple.edu/psychology/graduate/brain-and-cognitive-sciences](http://www.cla.temple.edu/psychology/graduate/brain-and-cognitive-sciences)
