

## Common Decisions for Survey Design (Qualtrics Example)

When planning a Qualtrics survey, a researcher makes decisions similar to those listed below. Adapt this guide as needed to facilitate Qualtrics data collection specific to your study, or to data collection using other methods.

Tip: Some decisions may affect whether you need to submit a protocol to Purdue’s IRB to then move on to collecting data or this information may be helpful while completing your protocol documents.

Decisions	Options	Comments/Questions
Who is in the study population?	<ul style="list-style-type: none"> <li>• A preexisting list (e.g., scholarship recipients).</li> <li>• Create a list (e.g., event attendees).</li> <li>• No list</li> </ul>	<ul style="list-style-type: none"> <li>• When can this list be obtained/created?</li> <li>• Who will obtain/create the list?</li> <li>• What identifiers are needed (e.g., PUID? Email?)</li> </ul>
Who is in the sample?	<ul style="list-style-type: none"> <li>• A subset of the population</li> <li>• Identify inclusion and exclusion criteria.</li> <li>•</li> </ul>	<ul style="list-style-type: none"> <li>• Can I justify targeting the full population?</li> <li>• What count of responses do I need?</li> <li>• What rate of response do I expect/need?</li> <li>• What is my strategy to create a random (or other) sample?</li> <li>• What are inclusion or exclusion criteria that may affect my sample?</li> </ul>
Are participants’ identities maintained?	<ul style="list-style-type: none"> <li>• Anonymously throughout</li> </ul>	<ul style="list-style-type: none"> <li>• A general link is used to promote the survey and identities are not saved in the survey.</li> <li>• A contact list is optional, but required if a profile of targeted participants is needed.</li> </ul>
	<ul style="list-style-type: none"> <li>• Identified by choice</li> </ul>	<ul style="list-style-type: none"> <li>• An anonymous link is used to promote the survey.</li> <li>• Participants may identify themselves (e.g., input their PUID) or aspects of their identity (e.g., gender identity, race/ethnicity, age or age bracket) within the survey.</li> <li>• A contact list is optional, but required if a profile of targeted participants is needed, or if the intent is to match self-identified respondents with other data.</li> </ul>
	<ul style="list-style-type: none"> <li>• Identification required</li> </ul>	<ul style="list-style-type: none"> <li>• Utilize either or both of the Qualtrics emailing function and/or placing the survey behind log-in.</li> <li>• A unique link is provided to each participant (check your survey settings).</li> <li>• A contact list is required.</li> <li>• Identifiers (from the contact list) can be merged with the survey results by Qualtrics.</li> </ul>

Decisions	Options	Comments/Questions
How will participants be notified of the survey?	<ul style="list-style-type: none"> <li>• E-mail distribution through Qualtrics</li> <li>• Personal e-mail</li> <li>• Other promotion (in a document, oral promotion, etc)</li> <li>• Paper-based alternative</li> </ul>	<ul style="list-style-type: none"> <li>• Is IRB approval is required? If yes, include components of the informed consent within the message.</li> <li>• Reminders may be sent, but consider whether your identification option will result in participants getting the reminder after completing the survey.</li> <li>• Consider other non-e-mail promotions as a way to better inform participants.</li> <li>• If using e-mail, consider from whom, and with what subject line the e-mail should be sent to garner the most interest of participants.</li> </ul>
Do I incentivize participants?	<ul style="list-style-type: none"> <li>• No incentive</li> <li>• Select participants receive an incentive</li> <li>• All participants receive an incentive</li> <li>• Respondents opt in to or out of the incentive</li> </ul>	<ul style="list-style-type: none"> <li>• Is the incentive “enough” to motivate honest responses but not seem to coerce respondents?</li> <li>• Do I have the resources/support to offer this incentive?</li> <li>• How will I distribute this incentive?</li> <li>• If incentivizing an IRB approved study, consider these compensation guidelines: <a href="https://www.irb.purdue.edu/docs/203_compensation.pdf">https://www.irb.purdue.edu/docs/203_compensation.pdf</a></li> </ul>
What introductory text should appear in the survey?	<ul style="list-style-type: none"> <li>• Informed consent</li> <li>• Other text</li> </ul>	<ul style="list-style-type: none"> <li>• If IRB approval is required. (see “consent template” at: <a href="https://www.irb.purdue.edu/forms/">https://www.irb.purdue.edu/forms/</a>)</li> <li>• When IRB approval is not required, the introductory content of your survey should establish rapport and trust (the people/unit asking for this information is legit) and ensure that the data will be immediately applicable to the constituents’ experiences at/with Purdue..</li> </ul>
What is the survey content?	<ul style="list-style-type: none"> <li>• All close-ended questions</li> <li>• All open-ended question</li> <li>• A mix of close-and open ended questions</li> </ul>	<ul style="list-style-type: none"> <li>• If using a pre-existing inventory of question/answers or survey items, obtain permission to use the survey items.</li> <li>• If creating new questions, refer to the tips covering question types.</li> <li>• Draft your content without regard to length; be inclusive of all the possible content you need. You can reduce length later, by prioritize the core content.</li> </ul>
How should the survey be terminated?	<ul style="list-style-type: none"> <li>• By a set deadline.</li> <li>• By a rolling deadline (ex: 2 weeks after invitation)</li> <li>• No deadline (on-going data collection)</li> </ul>	<ul style="list-style-type: none"> <li>• For pre-tests, complete data collection before the intervention has begun.</li> <li>• For post-tests, start data collection after the intervention has concluded.</li> <li>• How will length of availability affect desired participation rates?</li> <li>• Consider an appropriate length of time, but not too much. (i.e., avoid “I’ll do it later” syndrome.)</li> <li>• If no deadline, still encourage a response within a given time frame.</li> <li>• If the survey itself does not terminate, consider whether a person’s access to the survey terminates.</li> <li>• For assessment within phases, ensure data are collected with the completion day/time recorded.</li> </ul>

Decisions	Options	Comments/Questions
<p>Do survey item prompts make sense?</p> <p>Do options in the response scale align with the prompt?</p>	<ul style="list-style-type: none"> <li>• Get feedback</li> <li>• Consider various response scales- Likerts of agreement, frequency, likeness/similarity, etc.</li> </ul>	<ul style="list-style-type: none"> <li>• You could wait to get responses before you find out what is wrong, or ask for help from possible respondents or other colleagues to edit your content; review is highly recommended (aka, protocol testing). When seeking review:               <ul style="list-style-type: none"> <li>○ Ask the reviewer to “think like your participants.” For example, if your participants are first-year students, asking reviewers to think like a first-year student will help them give you better feedback or better yet, have some second year students review the content</li> <li>○ Seek input for ways to simplify the language- no jargon.</li> <li>○ Test all possible conditions (skip logic, display logic, etc.).</li> <li>○ Test your piped text by creating a “test” contact list with values close to the data.</li> </ul> </li> </ul>
<p>What tense do I need in each prompt?</p>	<ul style="list-style-type: none"> <li>• Past, present, or future</li> </ul>	<p>Ensure the wording of survey items matches the content. For example, suppose you wanted to know about students’ frequency of using study StrategyX. At different times, the prompt could be:</p> <ul style="list-style-type: none"> <li>• “<i>How often do you intend to use StrategyX?</i>” If asked before an academic period begins.</li> <li>• “<i>How often are you using StrategyX?</i>” if asked during the academic period.</li> <li>• “<i>How often did you use StrategyX?</i>” if asked after the academic period ends.</li> </ul>
<p>Is the time to complete the survey reasonable?</p>	<ul style="list-style-type: none"> <li>• Short, medium, or long; brief (3-5 questions) or exhaustive (200+ questions).</li> </ul>	<ul style="list-style-type: none"> <li>• Is each survey item essential to the study purpose? If not, what can I do to shorten the survey?</li> <li>• How long does it take a pool of sample survey takers to complete the survey?</li> <li>• If the survey is lengthy, consider whether it’s reasonable for subsets of participants to receive shorter versions of the survey.</li> </ul>
<p>Is the survey content “easy?”</p>	<ul style="list-style-type: none"> <li>• Readability</li> <li>• Flow</li> <li>• Clarity</li> <li>• Understanding</li> </ul>	<ul style="list-style-type: none"> <li>• Remove unnecessary jargon, technical terms, wordiness, and negation.</li> <li>• Test all possible flows through a survey. Simplify and shorten everywhere possible.</li> <li>• Use a progress bar to help participants understand what to expect.</li> </ul>

Decisions	Options	Comments/Questions
Is my survey unbiased?	<ul style="list-style-type: none"> <li>• Biased or unbiased options</li> <li>• Leading</li> <li>• Issues around recall or the halo effect</li> </ul>	<ul style="list-style-type: none"> <li>• Many forms of bias exist, and survey content can easily, even if unintentionally, bias the results. For example, Does the survey contain:               <ul style="list-style-type: none"> <li>○ Polarizing statements or prompts? AKA, extreme response bias</li> <li>○ Unnecessary adjectives?</li> <li>○ Unbalanced scales?</li> <li>○ Social acceptance bias</li> </ul> </li> <li>• Predict how participants could reply, and make sure survey items are inclusive of all possible responses.</li> <li>• Do your questions ask respondents to think too far back, to a particular experience or similar (aka, response bias)?</li> <li>• Do your questions or topic lead respondent to respond to a series of questions about an experience based solely on their feeling about one attribute?</li> </ul>
What language should I use?	<ul style="list-style-type: none"> <li>• English</li> <li>• Other</li> </ul>	<ul style="list-style-type: none"> <li>• Conduct your survey in English, unless you have a specific reason to use another language. For help with language in Qualtrics, see: <a href="https://www.qualtrics.com/support/survey-platform/survey-module/survey-tools/response-management-tools/translate-survey/">https://www.qualtrics.com/support/survey-platform/survey-module/survey-tools/response-management-tools/translate-survey/</a></li> </ul>
<p>How will I analyze these data?</p> <p>How will I report results?</p>	<ul style="list-style-type: none"> <li>• Descriptives (n and %)</li> <li>• Mean, median, mode</li> <li>• Standard deviation</li> <li>• Inferential analysis</li> </ul>	<p>You may not need to know the details of your analyses, but predicting your analysis may help you prepare the dataset for analysis. Consider:</p> <ul style="list-style-type: none"> <li>• What Qualtrics items are collecting data that I already possess? (e.g., if Qualtrics data are identified, can I merge in the needed demographics?)</li> <li>• What data need to be merged with the Qualtrics results? What variables are needed for merging?</li> <li>• Have I collected data in a way that fits my predicted model for analysis?</li> </ul>
