Coeus 4.3.7 and Java Version Requirement

Coeus is a Java application developed by MIT and used at Purdue for sponsored program management activities. A new version, Coeus 4.3.7, was installed the weekend of May 1, 2010.

Please note: The new version requires Java 1.5

The previous version, Coeus 4.3.5, used Java 1.4.2. The new version of Coeus will not launch if the correct version, Java 1.5, is not installed.

Note: Preliminary testing revealed that when both Java 1.6 and Java 1.5 are installed on a single computer, Coeus will continue to function as expected. (In the test environment, Java version 1.6 was installed first, then version 1.5.)

Additional information on Coeus may be found at:
