

**08 5000 – Windows**

Page 1 of 1

**Last Update: July 1, 2009**

A. Function:

1. Window function will be discussed in the Program on a building-to-building basis. In general, fixed windows are preferred in laboratories and classrooms, while operable windows are preferred in offices.

B. Glass Type:

1. Clear, low-E glass should be used in most cases.

C. Humidity:

1. Window specifications must consider the heating season humidity levels within the building. We do not want condensation to occur on the windows.

D. Aluminum Windows:

1. All aluminum windows must have thermally broken frames and insulated glazing.
2. Aluminum window frames may be dark bronze anodized or, for other colors, have a Kynar finish.
