

Point of departure

Pointings in sign language (SL) and spoken language (SpL) show phonological resemblance to a large extent.

However:

Pointing gesture ≠ pointing sign

Difference in discursive function

Analysis of pointings to non-sender, non-addressee oriented referents in Catalan Sign Language and spoken Dutch.

Reference & modality

Concrete reference

Reference with an orientation towards an object, which is physically present.

Abstract reference

Reference with an orientation towards a location, to refer to something that is not physically present.

Modality

SL → Visual-gestural modality

SpL → Dominant: audio-vocal modality

Dependent: visual-gestural modality

Differences

*Productive abstract reference (SL) versus unproductive abstract reference (SpL)

*Coreferentiality (SL) versus autonomous pointings (SpL)

Anchoring vs Positioning

File cards

Reference tracking = file management

For every discourse referent a file card is created. Information to these file cards is added and new file-cards are created (Heim 1988).

Anchoring

= creation of a file card by a pointing

woman (x)

x tells y

x says to y

Positioning

= spatio-temporal information given by a pointing.

The pointing is added as a NP apposition (two adjacent units denoting identical referent)

man (x)

x has coffee

x seated to the right of

Stay local principle in SL: When a discourse referent is physically present, use an anchor for reference which coincides with the position of the object

Positioning in SL

Reference to a book present in the physical context

IX3 BOOK

"There is a book..."

IX3 BOOK TRADITIONAL

"Books are traditional..."

→ Anchor-establisher + position-giver

Anchoring in SL

WOMAN IX3
first mention

IX3 3-TELL-1
second mention

IX3 3-SAY-1
third mention

Positioning in SpL

[hij heeft heel veel k]offie voor z'n fans
he has very much coffee for his fans
'[He has lots of c]offee for his fans'

Conclusions

Pointing signs → anchoring & positioning
Pointing gestures → positioning
