Date:	_____
Time:	_____

TREATMENT CERTIFICATION

Building: _____ Room: _____ Phone: _____ Date: _____

Name of Principal Investigator (PI): _____

Category 1. Biological Waste: Waste known, assumed, or suspected of being infectious to humans, plants, or animals and could cause harm if released to the environment. Infectious waste includes contaminated materials and/or sharps that have been exposed to human fluids, human cell lines, or with biohazardous organisms (e.g., petri dishes, surgical wraps, culture tubes, syringes, blood vials).

Describe composition of waste material:

--

Number of Bags: _____

Number of Boxes: _____

Treatment Method: _____

Category 2. "Look-Alike" Wastes: Waste with the general appearance of infectious or medical waste, but actually is not biohazardous. Also known as "lookalike" waste (e.g., non-infected animal tissue, fluids, cell cultures, non-biohazardous used petri plates, syringes, and animal blood-stained surgical items).

Describe composition of waste material:

--

Number of Bags: _____

Number of Boxes: _____

Treatment Method: _____

(None Required)

Requesting Person's Signature: _____

REM use only

Date picked up: _____
