Unauthorized users with g-mail address

Password e-mails are being filtered to SPAM by g-mail. To prevent this, follow the following steps:

Login your g-mail account.

In the top right hand corner, the gear icon is account Settings

Click on the gear icon, then click on “Settings”

Click on “Filters and Blocked Addresses”

Click the link “Create a new filter”

Enter the e-mail address purdue_bursar_notice@purdue.edu then click the link in the lower right corner of the box "Create filter with this search"
On the next page check "Never send it to Spam"

Then click the button "Create filter."
You can then request a new temporary password by entering your e-mail as your login and then clicking the link under the login box.

Please check your g-mail SPAM folder if you do not see the password e-mail in a couple of minutes. You will need to use the most recent temporary password to login if you find old e-mails in the SPAM folder.
