

Chemicals Requiring Designated Areas

The OSHA Laboratory Standard 29 CFR 1910.1450 mandates that an employer's Chemical Hygiene Plan provide for the establishment of **designated areas** which may be used for work with "select carcinogens," reproductive toxins and substances which have a high degree of acute toxicity". A designated area may be the entire laboratory, an area within a laboratory, or a storage or containment device such as a laboratory hood."

The sticker shown here (available from REM) is to be used to designate areas for use of the following select carcinogens, reproductive hazards, and substances having a high degree of acute toxicity. Affix one or more stickers at all work and storage locations associated with these materials. If you store but are not using one or more of these materials, please sticker the storage area. If the material is stored in a work area, designate the work area as well (material stored in a work area implies it is likely to be used at some time).

NOTE: Designating an entire room by placing this sticker at the entrance will simplify the placement of stickers **but will also prohibit all eating, drinking, and storage or preparation of food or beverages anywhere in the room** (if not already prohibited for other reasons).
