

Add Rainscaping — Improve the Environment

Landscapes with rainscaping capture stormwater and reduce polluted runoff from homes and communities.

The **Purdue Rainscaping Education Program's** workshops aim to

promote community awareness of rainscaping practices such as rain gardens and to increase the amount of rainscaping in residential and small-scale public spaces.

Our education programs are for Purdue Master Gardeners, members of conservation agencies and organizations, stormwater professionals, and landscape professionals and consultants.

Learn more about how rainscaping can reduce polluted stormwater runoff, and how to plan, install, and maintain rain gardens.

PURDUE RAINSCAPING EDUCATION PROGRAM

Landscapes with rainscaping capture stormwater, which reduces polluted runoff from homes and communities.

When plants and soils of a rainscaped landscape absorb water from storms, they keep pollution from reaching streams, rivers, and lakes.
