## Homework H.2.B

Given: A circular disk is pinned to a block at its center O, with the block being constrained to move along a horizontal surface. The angular velocity $\vec{\omega}$ and angular acceleration $\vec{\alpha}$ of the disk are in the directions shown in the figure. The block is moving the right with a speed of $v_{O}$ and an acceleration of $a_{O}$. At the position shown, point A on the perimeter of the disk is directly below O.

Find: For this position, determine the velocity and acceleration of point A. Express your answers as vectors.

Use the following parameters in your analysis: $R=0.75 \mathrm{~m}, \omega=4 \mathrm{rad} / \mathrm{s}, \alpha=2 \mathrm{rad} / \mathrm{s}^{2}, v_{O}=3$ $\mathrm{m} / \mathrm{s}$ and $a_{O}=4 \mathrm{~m} / \mathrm{s}^{2}$.
