## Homework H.3.I

Given: A shaft is rotating about the fixed $X$-axis at a constant rate of $\Omega$. A square plate is pinned at its center O to the centerline of the shaft and is rotating relative to the shaft about O at a constant rate of $\dot{\theta}$. A set of $x y z$ axes are attached to the plate with its origin at O . An insect on the plate is walking along the $y$-axis with a constant speed of $v_{r e l}$ relative to the plate.

Find: Determine the velocity and acceleration of the insect when the insect has reached the edge of the plate. The insect reaches the edge of the plate when $\theta=0^{\circ}$.

Use the following parameters in your analysis: $b=6 \mathrm{in}, v_{\text {rel }}=12 \mathrm{in} / \mathrm{s}, \Omega=3 \mathrm{rad} / \mathrm{s}$ and $\dot{\theta}=5$ $\mathrm{rad} / \mathrm{s}$.
