

Homework H3.J

Given: A shaft is rotating about the fixed X -axis at a constant rate of Ω . A square plate is pinned at its center O to the centerline of the shaft and is rotating relative to the shaft about O at a constant rate of $\dot{\theta}$. A set of xyz axes are attached to the plate with its origin at O . An insect on the plate is walking along the y -axis with a constant speed of v_{rel} relative to the plate.

Find: Determine the velocity and acceleration of the insect when the insect has reached the edge of the plate. The insect reaches the edge of the plate when $\theta = 0^\circ$.

Use the following parameters in your analysis: $b = 6$ in, $v_{rel} = 12$ in/s, $\Omega = 3$ rad/s and $\dot{\theta} = 5$ rad/s.
