

Question 1

A particle P moves with a velocity \vec{v} and acceleration \vec{a} . These vectors are expressed in terms of the Cartesian components of: $\vec{v} = (-40\hat{i} + 30\hat{j}) \text{ m/s}$ and $\vec{a} = (12\hat{i} + 10\hat{j}) \text{ m/s}^2$. Indicate below the most accurate description of the rate of change in speed of P:

- a. P is increasing in speed
- b. P is moving with constant speed
- c. P is decreasing in speed**
- d. More information is needed

$$\dot{v} = \vec{a} \cdot \hat{e}_t = (12\hat{i} + 10\hat{j}) \cdot \left(\frac{-40\hat{i} + 30\hat{j}}{50} \right) = -\frac{48}{5} \text{ m/s}^2 < 0$$

Question 2

Choose the figure below that most accurately represents the velocity \vec{v}_A of point A on the circumference of the disk.

- a. Figure (a)
- b. Figure (b)
- c. Figure (c)**
- d. Figure (d)

Figure (a)

Figure (b)

Figure (c)

Figure (d)

Question 3

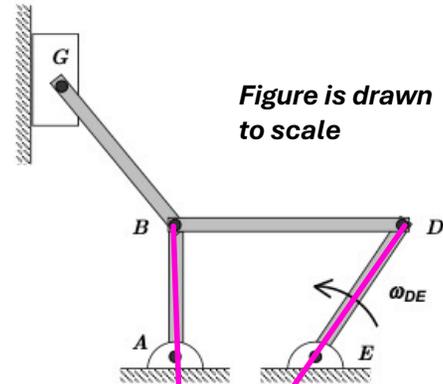

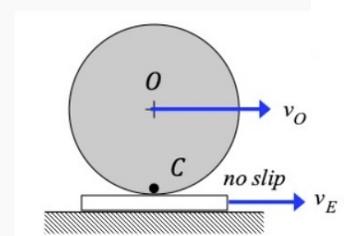

Figure is drawn to scale

- a. $|\omega_{BD}| > |\omega_{AB}|$
- b. $|\omega_{BD}| = |\omega_{AB}|$
- c. $|\omega_{BD}| < |\omega_{AB}|$**
- d. More information needed

$$v_B = |\vec{r}_{B/C}| \omega_{BD} = |\vec{r}_{B/A}| \omega_{AB} \Rightarrow \frac{\omega_{AB}}{\omega_{BD}} = \frac{|\vec{r}_{B/D}|}{|\vec{r}_{B/A}|} > 1$$

Question 4

A circular disk rolls without slipping to the right on a moving block with its center O having a speed of v_O . The block moves to the right with a speed of v_E , where $v_E > v_O$.

Choose the figure below that most accurately represents the velocity \vec{v}_C of the contact point C on the disk.

- a. Figure (a)**
- b. Figure (b)
- c. Figure (c)
- d. Figure (d)

$$\text{No slip} \Rightarrow \vec{v}_C = \vec{v}_E$$
