

ME 562 – Spring 2020
Topical Listing of Course Material

Chapter 0: Vectors, unit vectors and vector components

0.1 Vectors	0.1
0.2 Vectors written in terms of unit vectors.....	0.3
0.3 Vectors in component form	0.7
0.4 Summary	0.9
0.5 Chapter examples.....	0.11

Chapter I: Kinematics of particles

I.1 Velocity and acceleration	I.1
I.2 Velocity and acceleration in Cartesian coordinates.....	I.2
I.3 Velocity and acceleration in cylindrical coordinates.....	I.3
I.4 Velocity and acceleration in spherical coordinates	I.5
I.5 Velocity and acceleration in path coordinates	I.7
I.6 Summary.....	I.13
I.6 Chapter examples	I.15

Chapter II: Rigid body kinematics

II.1 Definition of a rigid body.....	II.1
II.2 Space-fixed and body-fixed coordinate axes	II.2
II.3 Coordinate transformations	II.3
II.4 Rigid body rotations	II.6
II.5 Euler's theorem	II.12
II.6 Finite and infinitesimal rotations of a rigid body	II.14
II.7 Angular velocity of a rigid body	II.19
II.8 Rigid body kinematics equations	II.21
II.9 Rigid body kinematics equations in component form.....	II.24
II.10 Rigid body kinematics using Euler angles	II.26
II.11 Chasles' theorem	II.34
II.12 Planar motion of rigid bodies	II.35
II.13 Summary	II.38
II.14 Chapter examples	II.39

Chapter III: Moving reference frame kinematics

III.1 Definitions and notation.....	III.1
III.2 Velocity using moving reference frames	III.3
III.3 Acceleration using moving reference frames	III.4
III.4 Making a distinction between reference frames and coordinate axes.....	III.6
III.5 Chapter examples.....	III.7

Chapter IV: Kinetics of a particle

IV.1 Newton's laws	IV.1
IV.2 Work/energy equation	IV.4
IV.3 Linear impulse/momentum equation	IV.7
IV.4 Angular impulse/momentum equation	IV.8
IV.5 Chapter examples.....	IV.11

Chapter V: Kinetics of a system of particles

V.1 Newton's laws for a system of particles	V.1
V.2 Work/energy for a system of particles	V.3
V.3 Angular momentum equation for a system of particles	V.7
V.4 Constraints, generalized coordinates and number of DOFs.....	V.10
V.5 Virtual displacements and virtual work	V.19
V.6 Lagrange's equations when using independent coordinates	V.22
V.7 Lagrange's equations when using non-independent coordinates.....	V.25
V.8 Generalized momenta and ignorable coordinates	V.28
V.9 Chapter examples.....	V.31

Chapter VI: Kinetics of a rigid body

VI.1 Angular momentum and kinetic energy for a rigid body	VI.3
VI.2 The inertia matrix for a rigid body	VI.7
VI.3 Newton/Euler equations for a rigid body.....	VI.14
VI.4 Modified Euler's equations.....	VI.17
VI.5 Work/energy equation for a rigid body	VI.19
VI.6 Chapter examples.....	VI.25

Chapter VII: Special topics and problems

VII.1 Torque-free dynamics of an axi-symmetric body	VII.1
VII.2 General torque free motion of a rigid body: stability of steady motion	VII.13
VII.3 Dynamics of a spinning top.....	VII.17
VII.4 Dynamics in the Earth's rotating reference frame.....	VII.23
