Virtual 3MT Preparation - Competitors

Even the world’s best presenters prepare before important presentations. To assist your competitors with their preparations, please find below suggestions that will help them in writing their presentation, creating their slide, as well as practising, recording and submitting their presentation.

3MT Writing

Write for your audience
One of the judging criteria looks for evidence that you can explain your research to a non-specialist audience. To do this you may like to:

– Avoid jargon and academic language;
– Explain concepts and people important to your research (you may know all about Professor Smith’s theories but your audience may not);
– Highlight the outcomes of your research, and the impact it will have;
– Imagine that you are explaining your research to a close friend or fellow student from another field; and
– Do not devalue your research, what you are doing is exciting and you should convey enthusiasm for your subject.

Tell a story
You may like to present your 3MT like a story, with a beginning, middle and an end. It’s not easy to condense your research into three minutes, so you may find it easier to break your presentation down into smaller sections. Try writing an opener to catch their attention, then highlight your different points, and finally have a summary to restate the importance of your work.

Have a clear outcome in mind
Know what you want your audience to take away from your presentation. Ideally, you would like the audience to leave with an understanding of what you’re doing, why it is important and what you hope to achieve.

What not to do
Do not write your presentation like an academic paper. Try to use shorter words, shorter sentences and shorter paragraphs. You can use humour, however be careful not to devalue your presentation.

Revise
Proof your 3MT presentation by reading it aloud, to yourself and to an audience of friends and family. This allows you to not only check your style, but it will allow you to receive critical feedback. Ask your audience if your presentation clearly highlights what your research is and why it is important.

3MT PowerPoint Slide

Before you start work on your slide, you should take the following rules into account:

– a single static PowerPoint slide is permitted;
– no slide transitions, animations or ‘movement’ of any description are permitted; and
– no additional electronic media (e.g. sound and video files) are permitted.

An engaging visual presentation can make or break any oration, so you want your slide to be legible, clear and concise. You may like to consider some of the following suggestions.

Less is more
Text and complicated graphics can distract your audience – you don’t want them to read your slide rather than listen to your 3MT.

Suspects, Science and CSI
Slide: Matthew Thompson, 2011

Personal touches
Personal touches can allow your audience to understand the impact of your research.

Ocker or Oriental? Asian Australians and the Denial of National Identity
Slide: Michael Thai, 2013

Creativity drives interest
Do not rely on your slide to convey your message – it should simply complement your spoken oration.

The Fourth Man
Slide: Ryan Stafford, 2011

Work your message
Think about how your slide might be able to assist with the format and delivery of your presentation – is there a metaphor that helps explain your research?

**3MT Presentation**

Practice, practice, practice

Before you record your presentation it is important to practice so you can present with confidence and clarity.

**Vocal range**
- Speak clearly and use variety in your voice (fast/slow, loud/soft).
- Do not rush – find your rhythm.
- Remember to pause at key points as it gives the audience time to think about what you are saying.

**Body language**
- Stand straight and confidently.
- Hold your head up and make eye contact.
- Never turn your back to the audience.
- Practise how you will use your hands and ensure your presentation is recorded/delivered from a single position.
- Do not make the common mistakes of rolling back and forth on your heels, pacing for no reason or playing with your hair as these habits are distracting for the audience.

**Dress**
- While there is no dress code, if you are unsure of how to dress you may like to dress for a job interview or an important meeting.
- Do not wear a costume of any kind as this is against the rules (as are any props).

**3MT Recording - Device Options**

Recording your presentation can be done using a camera and or handheld video recorder however most phones allow you to record through the camera function and most computers have recording ability (via camera or webcam) using inbuilt programs such as:

**Windows**
- Camera App
- Windows Movie Maker

**Macintosh**
- QuickTime
- iMovie

Online programs which you might like to consider include:
- Zoom

**3MT Recording - Filming at Home**

There are three factors to consider when selecting your location to ensure you are producing the best video possible: light, sound and background.

**Light**

Dark environments impact the overall quality of your video because cameras do not perform well in dim lighting. Ensuring you are well lit guarantees the camera and therefore, your audience, can see you clearly. Look for a room in your home that has lots of natural light. If you are using light from a window, ensure you are facing towards the window so light falls on you directly.

Any additional lighting you can introduce will further improve the quality of your video. Look around your home for desk lamps, torches etc. Watch this tutorial for more information.

**Sound**

When filming video at home, ensure you choose a very quiet environment where you have as much control over the sound as possible. For example, choose a small room where you have the ability to close all doors and windows. Make sure any noisy electronics in the room such as fans, air conditioners, computers, phones and possibly even your fridge are temporarily turned off. These are much louder in video than you may think and are very distracting to your audience!

Be aware of any audible interruptions you don’t have control over such as aeroplanes, lawns mowers and cars. Consider filming during a quiet time of day such as early in the morning when there are likely to be less interruptions. If there are audio interruptions during your recording, do not continue. Wait it out and try again at a later point!

**Background**

Aim for a clean, plain wall as your background, completely free of visual distractions from the waist up where you will be framing your shot.

3MT Recording - Setup

Whether you're filming on a phone, tablet or web cam, there are further factors to consider when actually setting up to film your video:

Support
Ensure phones and tablets have enough storage available, are in aeroplane mode, fully charged and either connected to a tripod or, placed on a stable surface (think creatively - Blu Tack to wall). Your friend cannot offer to be a tripod by holding your phone or iPad for you: Your video needs to be completely stable as movement is very distracting.

Proximity
Ensure your recording device isn't too far away from you. The microphone on the device should be as close to you as possible to achieve both the desired framing and to ensure the audio is as clear as possible.

Test recording
Complete a short recording of a portion of your talk. Ensure you are speaking at the volume you intend to use for your presentation. Review the test recording to ensure all of the above elements are complete and working.

Presentation tip
Be aware of your eye movement. Maintain eye contact with the camera lens as though they were a person in the audience watching you present live.

Focus
Before you start recording, ensure your device is able to auto focus on you and isn't focusing on anything else around you instead. Be sure to watch your recording back and ensure you remain in the focus the entire duration.

Support
Ensure phones and tablets have enough storage available, are in aeroplane mode, fully charged and either connected to a tripod or, placed on a stable surface (think creatively - Blu Tack to wall). Your friend cannot offer to be a tripod by holding your phone or iPad for you: Your video needs to be completely stable as movement is very distracting.
