

# Aphasia Resources at Purdue University

What is Aphasia? Aphasia is a common result of a stroke. People with aphasia may experience difficulty speaking, understanding others, reading and writing.

## Aphasia Research Lab

- The aphasia lab studies language difficulties and recovery in stroke survivors.
- Our goal is to translate research into approaches for diagnosis and treatment of aphasia and language disorders. Persons with aphasia can be part of this exciting research!
- Persons with aphasia due to stroke are invited to participate and are **compensated for their time**.
- Lab website: <https://www.purdue.edu/hhs/slhs/aphasia/>
- Contact us by email: [aphasia@purdue.edu](mailto:aphasia@purdue.edu) or phone: 765-496-0216

## Aphasia Support Group

- Adults with aphasia, their loved ones and caregivers are invited to **FREE** monthly meetings for guided conversation practice, educational sessions, and connecting with others. Caregivers and people with aphasia often divide into separate groups during the meeting time.
- Group meets one time per month during the semester from 6:30-8:00pm
- Located on campus @ Lyles-Porter Hall, 715 Clinic Drive, W. Lafayette, 47907
