We are looking for generally healthy persons (ages 18 and over) for a research study being conducted at Purdue University’s West-Lafayette campus. This study examines prehensile behavior by measuring the ability of healthy individuals to grasp and maneuver a hand-held object.

Participation involves one visit to the lab lasting about 2 hours. The visit will include questionnaires and various tests pertaining to manual function and cognition and computer-based tasks that involves tracking a target on a computer screen with a cursor that is controlled by moving a hand-held object in different directions. Participants will receive $20 for completing the study.

If interested, contact the research team at naik20@purdue.edu or call at 765-772-8840. The principal investigator for this study is Dr. Satyajit Ambike (sambike@purdue.edu) with the Department of Health and Kinesiology. IRB#: 1811021283.
