This week's seminar will be virtual; there will be no in-person presentation. Meeting link: https://purdue.webex.com/purdue/j.php?MTID=md656e69c47258259eda05c84607f99d8

“HSCI 1553 – Advanced Safety Management & Culture: Semester Project Presentation”
Mark Wilson
Lecturer, Industrial Hygiene and Ergonomics
Purdue University
School of Health Sciences

Tuesday, November 24, 2020
4:30-5:30 PM Eastern Time (US and Canada)

Research:

HSCI 553, Advanced Safety Management and Culture, is a graduate level Occupational Health Sciences course offered for the first time this year. A major component of this course is a semester long project, in which the students work with a small business to help improve its safety program. This semester, our students worked with a locally owned pest control company. They reviewed the company’s safety program, and provided input to help update and streamline their safety policies & procedures. The students of the HSCI 553 will present information about the company, how we approached the task of updating a safety program, and the results of that project.
