

## PSY 390 Research Opportunity – Summer 2022

### Faculty member or graduate student

Dr. Thomas S. Redick  
Purdue Applied Cognition Laboratory (PacLab)  
<https://sites.google.com/view/redicklabb/>

### Description of research area

Our lab is involved in several research projects focused on understanding the role of working memory and cognitive control as predictors of behavior. Our work is very applied in nature.

This summer we plan to run in-person data collection on at least three projects:

- Attention and videogame play
- Spatial navigation
- Short-term memory

### Description of undergraduate participation

Our needs for the summer are pretty specific, as compared to our fall and spring research experiences.

We will be most active with data collection in the period from July 11 through August 14.

We will also have more limited opportunities for data collection in late May through early August.

### Research setting

The PacLab is located on the third floor in the Psychology Building.

### Number of assistants needed

2-3 students. If you are interested in joining our laboratory, please contact Dr. Redick at the email address below. In your message, please include your current year in school, your availability for the times listed above, a resume/CV if you have one, and any relevant work or research experience.
