Requesting and Using BoilerCast

Description
Powered by Kaltura Classroom, the BoilerCast lecture capture service can be used to record classes which students can then watch any time they need to review your lecture. BoilerCast lecture capture is available in all centrally scheduled classrooms, and can be set to record your classes automatically on request, allowing you to focus on instruction.

Requesting BoilerCast
Instructors wanting to use BoilerCast need to fill out a request form which is located on the following site: https://www.purdue.edu/innovativelearning/supporting-instruction/instructional-technology/boilercast.aspx. The recordings will occur automatically in the classroom based on the times that were specified on the form.

Using BoilerCast
1. Go to the classroom during the scheduled time
2. Log in to the PC at the front of the room
3. The recording will start automatically at the scheduled time and end automatically at the scheduled end time
4. After processing is complete, the recording will automatically publish to Blackboard or Brightspace if that was selected on the request form
