Physician Assistant (P.A.-C)

Career Description

- Physician Assistants are trained to provide diagnostic, preventive and therapeutic care as designated by a licensed physician.
- PAs are trained as generalists but can also work in specialty areas.
- PAs can perform such duties as physical exams, diagnosing and treating illness, ordering and interpreting lab tests, prescribing medication, suturing wounds, assisting in surgery, providing patient education and counseling, and making rounds in hospitals.
- Nearly 40% of PAs practice in hospital settings. An equal number work in group and solo-physician offices. The rest are found in rural and community health centers, nursing homes, surgical facilities, school and college-based health centers, industry, and correctional facilities.
- Originally PA programs were created to train former military corpsmen to practice medicine and provide care for people with limited access to health care.
- In recent years, the field has included students directly from undergraduate studies as well as practitioners from a variety of healthcare fields.

Becoming a Physician Assistant

- To attend one of the accredited PA programs, a bachelor’s degree with any major of choice is needed as long as appropriate prerequisite courses are completed (see below).
- **Considerable health care experience** (generally hands-on patient care) is needed to be admitted to most programs. Some require as many as 2,000 hours.
- PA students spend more than 2,000 hours in clinical rotations including specialties in family medicine, pediatrics, emergency medicine, internal medicine, general surgery, psychiatry, and obstetrics/gynecology.
- Training is competency based. Once clinical training is finished, students must pass the national PA certification exam to become a PA-C and then be licensed in their state.

Prerequisite Courses

- Course requirements can vary substantially between programs, you should look at possible programs to which you would like to apply early in your academic career to make sure you meet their requirements.
- The initial courses are similar to other professional health care fields such as MD programs.

Common Prerequisite Courses (pre-reqs determined by each PA school & may vary from this list)

</table>
Job Outlook

- According to the Bureau of Labor Statistics (BLS), “Physician Assistants rank among the fastest growing occupations, as physicians and health care institutions increasingly utilize Physician Assistants to contain costs.” The BLS predicts 30% job growth through 2024.
- Some studies have shown PAs save as much as 20% of the costs of medical care and can perform at least 80% of the functions in an ambulatory care practice.
- U.S. News and World Report in 100 Best Jobs of 2014 ranked PA as one of the top 15 jobs.
- Median pay for a PA was $98,180 in 2015.

Preparation

- Observe a PA to make sure this the right field and you truly understand what a PA does.
- The most significant hurdle to a competitive application is the hands-on patient care requirement. As above, some schools require 2,000 hours. Schools have different opinions on the experiences they value for this, so be sure to research the schools you are interested in carefully. Generally you will need additional training so you can work in a health care setting.

Applying

- Some programs require the Graduate Record Exam (GRE).
- The initial application to most PA programs is through an online application service called the Central Application Service for Physician Assistants (CASPA).
- Your letters of reference may be submitted electronically and you are responsible for sending all of your college transcripts (along with a transcript request form) to CASPA for verification.
- Your online application will also include an essay.
- Early application is recommended.
