WHAT IS IN A VAPE?

YOU CAN LIVE WITHOUT IT.

The mouth piece is used to inhale vapors.

This section holds the e-liquid that will be vaporized. Unauthorized e-liquids may contain harmful chemicals such as vitamin E (CDC, 2019).

This section also houses the heating coil used to heat the e-liquid into a vapor. Heavy metals such as lead and copper have been found in the vapor due to some types of heating mechanisms (Truth Initiative E-Cigarette Fact Sheet, Nov. 2019).

This section houses the battery used to heat the coil. Heating your e-liquid above the recommended levels may increase your chance of exposure to heavy metals.

70% of users share a vaping device. Sharing a device increases the risk of spreading diseases.

2,807 hospitalizations were reported in 2020 associated with vaping products (CDC, 2020).
