COVID-19 Fireside Chat

virus: SARS CoV-2; disease: COVID-19

Pam Aaltonen, PhD, RN Purdue School of Nursing Professor Emerita American Public Health Association Past President aaltonen@purdue.edu

Current Status (reporting slowed during holidays)

• Indiana (12.28.2020)

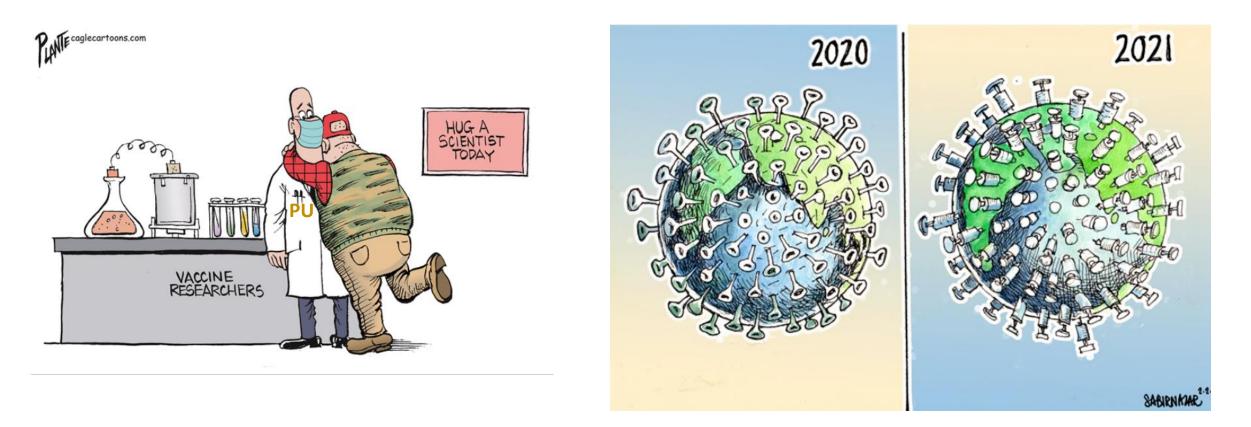

• Johns Hopkins

Vaccines are Here

Now the Wait

Vaccines

Approved: mRNA vaccines

- Pfizer/BioNTech (2 doses)
- Moderna (2 doses)
- Technology under investigation pre-COVID
- How do they work? "Email" sent to immune system to take action

Others in Works ... different platforms (prior technology)

Why so fast?

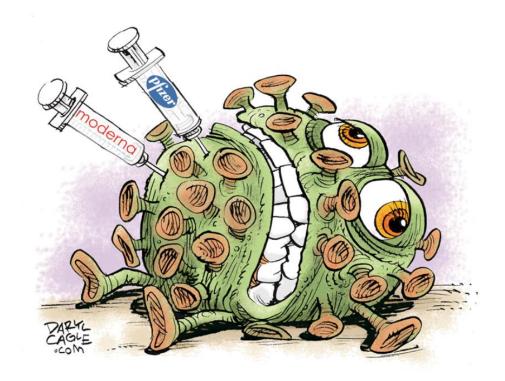

Parallel versus sequential steps; government investment (>\$9B); shared science

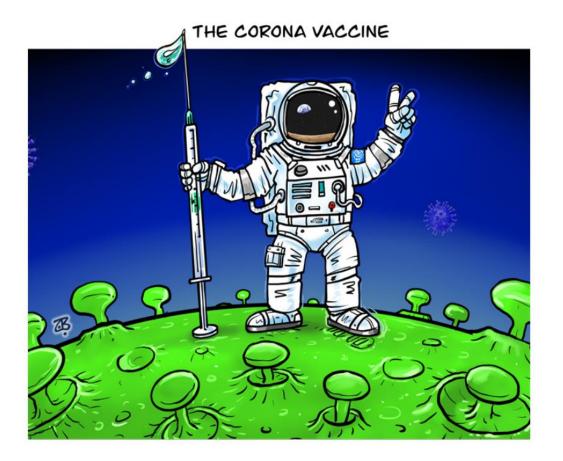

Challenges

• Priorities

- National recommendations; state actions
- Priority groupings
 - How reach
 - Who specifically in each group
- Distribution/Handling (logistics)
 - Timetable
 - Where vaccine goes
 - Who manages
- Availability
 - Vaccine
 - Vaccinators
 - Vaccine Recipients/Vaccine Hesitators
 - Tracking System

Efficacy & Safety Data being answered; Questions yet to be answered ...

- How long immune?
- Able to infect others?
- Children < 18/16 years of age
- Pregnant women
- Future impact of virus mutations

Continue Public Health Practices

Approved in USA to date: 2

Company	Туре	How Works	Where in Process	
Pfizer (NY) & BioNTech (Germany)	mRNA	Genetic instructions to build coronavirus protein (spike); spikes provoke immune system response 95% efficacy	FDA Emergency Use Authorization	
Moderna (Boston)	mRNA	94.5% efficacy	FDA Emergency Use Authorization	
AstraZeneca (Sweden) & Univ of Oxford (England)	Adenovirus	Mixed results dosing differences (62%-90%)	Phase III (EUA in England)	
Johnson & Johnson	Adenovirus	Initially one dose; trial now to assess two doses	Phase III; results expected this month
