

ROBOTICS

INSIGHTS FOR LOCAL
MANUFACTURERS

Robots are machines made to perform certain tasks, most commonly without the need for human interaction. There are many benefits to using robots including better efficiency and quality control, longer operating hours, high levels of flexibility allowing robots to perform very complex tasks quickly, and cost savings.

DID YOU KNOW?

The Industrial Robotics Industry is expected to grow by 175% over the next decade.

Application

Robotics is a fascinating field because of how versatile they can be. In the Engagement Center at Krannert School of Management, we have robots that can clean a floor without human assistance, sort objects in a variety of ways, write and engrave phrases and that is just the tip. It is truly limited only by one's imagination. ● ● ●
